

Mass flow controller (MFC)/mass flow meter (MFM) for gases

- Nominal flow range from 20 IN/min to 2500 IN/min (re. nitrogen)
- High accuracy and repeatability
- Communication via standard signals or Industrial Ethernet
- Electromagnetic and electromotoric valve actuation available
- Easy device exchange due to configuration memory

Product variants described in the data sheet may differ from the product presentation and description.

Can be combined with

Type 6013

Plunger valve 2/2-way direct-acting

Type 0330

Direct-acting 2/2 or 3/2-way pivoted armature valve

Type description

The mass flow controller (MFC)/mass flowmeter (MFM) type 8745 is suitable for controlling the mass flow of large gas quantities. Type 8745 can be configured as MFM or MFC according to demand. Optionally, up to four calibration curves can be stored in the device. The thermal inline sensor located directly in the main gas stream achieves very fast response times with minimal pressure loss. As the actuator, a Bürkert direct-acting proportional valve guarantees high response sensitivity. As an MFC, type 8745 is available in two variants: with electromagnetic proportional valve and with electromechanical proportional valve. In addition to an analogue and an industrial ethernet variant, a Modbus RTU variant is also available.

1. General technical data

1.1. General

Product properties	
Dimensions	Further information can be found in chapter “4. Dimensions” on page 7.
Material	
Seal	FKM or EPDM (depending on gas) ¹⁾
Housing	PC (polycarbonate)
Base block	Aluminium or stainless steel 1.4404/316L
Wetted parts (sensor)	Stainless steel 1.4404/316L, Al ₂ O ₃ , PPS GF40, epoxy resin, silicon, silicon nitride
Configuration management	Further information can be found in chapter “8.3. Configuration management for easy device replacement” on page 25.
Electrical data	
Operating voltage	24 V DC
Residual ripple	± 2 %
Voltage tolerance	± 10 %
Electrical connection	
Analogue variant	D-Sub plug, 9-pin ²⁾ or terminal strip, 6-pin
Industrial Ethernet variant	2 x RJ45 socket (Switch) ³⁾
Modbus RTU variant	D-Sub plug, 9-pin
Medium data	
Operating medium	Neutral, pure gases (others on request) Further information can be found in chapter “6.2. Nominal flow rate of typical gases” on page 22.
Calibration medium	Operating medium or air
Medium temperature	- 10 °C ⁴⁾ ... + 70 °C (- 10 °C ⁴⁾ ... + 60 °C with oxygen)
Product connections	
Analogue interface	4...20 mA, 0...20 mA, 0...10 V or 0...5 V Input impedance: > 20 kΩ (voltage) or < 300 Ω (current) Maximum current: 10 mA (voltage output) Maximum load: 400 Ω (current output)
Digital communication interface	Modbus RS-485/RTU list 0 and list 1, Industrial Ethernet: EtherCAT®, EtherNet/IP, Modbus TCP, PROFINET
Port connection	G 1/4", NPT 1/4, 3/8, 1/2, 3/4, 1, sub-base, clamp connection
Approvals and conformities	
North America (USA/Canada)	Further information can be found in chapter “2.4. North America (USA/Canada)” on page 6.
Foods and Beverages/Hygiene	Further information can be found in chapter “2.5. Foods and beverages/Hygiene” on page 6.
Oxygen	Further information can be found in chapter “2.6. Oxygen” on page 7.
Environment and installation	
Installation position	Horizontal or vertical
Storage temperature	- 10 °C... + 70 °C
Relative air humidity	Max. 95 % at + 55 °C, non-condensing
Degree of protection	IP20
Ambient temperature	- 10 °C... + 50 °C (higher temperatures on request)
Accessories	
Software	Bürkert Communicator Further information can be found in chapter “8.1. Bürkert Communicator software” on page 24.

1.) When using the electromotive proportional valve, the device additionally includes:

- Type 3280 DN 4: PEEK valve seat seal
- Type 3285: Al₂O₃ valve seat seal

2.) An additional digital input and a relay output are available for the analogue variant with D-Sub plug, 9-pin.

3.) Supply voltage via separate terminal strip

4.) When using an electromotive proportional valve, the minimum medium temperature is 0 °C.

1.2. Variant with electromagnetic proportional valve

Type 8745 can be configured as MFM or MFC as required. The MFC variant uses direct-acting proportional valves of the 287x series. These electromagnetic proportional valves are normally closed and stand for highest measuring accuracy and repeatability with settling times resp. response times of a few hundred milliseconds.

Product properties	
Dimensions	Further information can be found in chapter "1.2. Variant with electromagnetic proportional valve" on page 5.
Total weight	Approx. 1800 g (aluminium, 16 W valve) Approx. 3100 g (stainless steel 1.4404/316L, 16 W valve)
LED display ^{1.)}	RGB-LED based on NAMUR NE107
Actuator (proportional valve)	
Valve position	Normally closed
Nominal diameter	0.8...12 mm
K _{VS} value range	0.02...2.5 m³/h
Performance data	
Nominal flow range (Q _N) ^{2.)}	MFC: 20...1500 l _N /min (N ₂) ^{2.)} MFMs ≤ 2500 l _N /min (N ₂) ^{2.)}
Operating pressure ^{3.)}	MFM: max. 25 bar MFC: max. 25 bar (the maximum operating pressure depends on medium and nominal valve size)
Measuring accuracy ^{4.)}	± 1.5 % MV ^{4.)} ± 0.3 % FS ^{5.)} (under calibration conditions and after < 1 min warm-up time to achieve the best measuring conditions)
Repeatability	± 0.1 % FS
Turndown ratio	1:50
Settling time (MFC)/Response time (MFM) (t95)	< 500 ms
Electrical data	
Power consumption ^{6.)}	Max. 4 W (as MFM) Max. 12.5...31.5 W (as MFC, depending on proportional valve type)

1.) For a detailed description of LED colours see [operating instructions Type 8745](#) ►

2.) Index N: flow rates with respect to 1.013 bar abs and 0 °C

3.) Overpressure to atmospheric pressure

4.) If the operating medium differs from the calibration medium, the actual measuring accuracy may deviate from the specified value. If natural gas is used as the operating medium, the measuring accuracy depends on the composition of the natural gas, which can vary depending on origin and season.

5.) Of measured value

6.) Of full scale

7.) Information based on the typical power consumption (at + 23 °C ambient temperature, nominal flow rate and 30 min closed-loop control mode). The specifications according to UL 61010 - 1 may deviate (see [operating instructions Type 8745](#) ►).

1.3. Variant with electromotive proportional valve

Type 8745 with electromotive proportional valve is especially suitable for applications with high inlet pressures of up to 22 bar or high flow rates (at a low pressure drop). The motor's power consumption to hold a specific opening position is nearly zero. This key feature can reduce the energy consumption of a plant dramatically. Without electrical power the valve remains in its current position.

The maximum duty cycle of the motor depends on the ambient temperature. The duty cycle does not refer to the duty cycle of the device but to the duty cycle of the motor. The motor is not switched on unless the valve is to move. Frequent set-point value input changes will drastically increase the motor's duty cycle. Further information about the derating curve can be found in chapter ["6.3. Derating diagram for electromotive variants" on page 23.](#)

Product properties	
Dimensions	Further information can be found in chapter "1.3. Variant with electromotive proportional valve" on page 5.
Total weight	Approx. 1670 g (aluminium, valve Type 3280) Approx. 2940 g (stainless steel 1.4404/316L, valve Type 3280)
LED display ^{1.)}	With MFM: RGB LED according to NAMUR NE107 With valve: RGB LED to indicate valve opening
Actuator (proportional valve)

1.) For a detailed description of LED colours see **operating instructions Type 8745** ►

2.) Index N: flow rates with respect to 1.013 bar abs and 0 °C

3.) Overpressure to atmospheric pressure

4.) If the operating medium differs from the calibration medium, the actual measuring accuracy may deviate from the specified value. If natural gas is used as the operating medium, the measuring accuracy depends on the composition of the natural gas, which can vary depending on origin and season.

5.) Of measured value

6.) Of full scale

7.) Data during the movement of the electromotive proportional valve. Valve holding power is < 1 W.

2. Approvals and conformities

2.1. General notes

- The approvals and conformities listed below must be stated when making enquiries. This is the only way to ensure that the product complies with all required specifications.
- Not all available variants can be supplied with the below mentioned approvals or conformities.

2.2. Conformity

In accordance with the Declaration of Conformity, the product is compliant with the EU Directives.

2.3. Standards

The applied standards which are used to demonstrate compliance with the EU Directives are listed in the EU-Type Examination Certificate and/or the EU Declaration of Conformity.

2.4. North America (USA/Canada)

Approval	Description
	Optional: UL Listed for the USA and Canada The products are UL Listed for the USA and Canada according to: • UL 61010-1 (ELECTRICAL EQUIPMENT FOR MEASUREMENT, CONTROL, AND LABORATORY USE – Part 1: General Requirements) • CAN/CSA-C22.2 No. 61010-1

2.5. Foods and beverages/Hygiene

Conformity	Description
FDA	FDA – Code of Federal Regulations (valid for variable code PL02, PL03) All wetted materials are compliant with the Code of Federal Regulations published by the FDA (Food and Drug Administration, USA) according to the manufacturer's declaration.

USP	United States Pharmacopeial Convention (USP) (valid for variable code PL04) All wetted materials are biocompatible according to the manufacturer's declaration.
	EC Regulation 1935/2004 of the European Parliament and of the Council (valid for variable code PL01, PL02) All wetted materials are compliant with EC Regulation 1935/2004/EC according to the manufacturer's declaration.

2.6. Oxygen

Conformity	Description
	Optional: Suitability for oxygen (valid for the variable code NL02) The products are suitable for use with gaseous oxygen, according to the manufacturer's declaration.

6. Performance specifications

6.1. MFM pressure loss diagram

The diagram shows an example of the pressure loss curves with air flowing through. To determine the pressure loss of other gases, the corresponding air equivalent must first be calculated and the base block used for the other gas must be taken into account.

Formula for calculating the pressure loss in an MFM:

$$\Delta P_{\text{Gas}} = \Delta P_{\text{Air}} \sqrt{\frac{\rho_{\text{N Gas}}}{\rho_{\text{N Air}}}}$$

6.2. Nominal flow rate of typical gases

Note:

- All values refer to 1013.25 mbar abs and 273.15 K (0 °C) (Index N).
- Other gases and gas mixtures are possible on request.

Gas	Min. Q _N [l/min]	Max. Q _N [l/min]
Acetylene	20	320 (from 65 l/min with air calibration)
Ammonia	8	1000
Argon	20	1600
Carbon dioxide	20	800
Air	20	2500
Methane	20	1200
Propane	20	200
Oxygen	20	2500
Nitrogen	20	2500

6.3. Derating diagram for electromotive variants

7. Product operation

7.1. Measurement principle

This sensor works as a hot-film anemometer in the so called CTA operational mode (Constant Temperature Anemometer). 2 resistors with a precisely specified temperature coefficient located directly in the media flow and 3 further resistors are connected to form a measuring bridge. The first resistor in the gas flow (R_T) measures the fluid temperature, while the second, low value resistor (R_S) is always heated just enough to keep it at a fixed, specified excess temperature with respect to the fluid temperature. The heating current required for this is a measure of the heat dissipation and represents the primary measured variable.

Adequate flow conditioning within the MFC and calibration with high-quality flow standards ensure that the amount of gas flowing through per time unit can be derived from the primary signal with a high degree of accuracy.

8. Product accessories

8.1. Bürkert Communicator software

Note:

The corresponding communication software can be downloaded from the website **Type 8920** ►.

The Bürkert Communicator is the most important software component of the EDIP (Efficient Device Integration Platform). Various features of this universal tool simplify the configuration and parametrisation of devices equipped with a digital CANopen-based interface. With this tool, the user has a complete overview of cyclic process values as well as acyclic diagnostic data. The integrated graphical programming environment enables the creation of decentralised sub-system control functions. The connection to the PC is established with a USB-büS interface set. The adapter is available as an accessory (see **"9.5. Ordering chart accessories" on page 26**).

The Bürkert Communicator enables:

- Configuration, parametrisation and diagnosis of EDIP devices / networks
- Switching between defined gases
- Easy and comfortable mapping of cyclic values
- Graphic display, monitoring and storage of process values
- Firmware update of the connected EDIP devices
- Saving and restoring device configurations
- Zero-point adjustment in case of changed ambient conditions
- Guided re-calibration routine

8.2. Connecting Type 8745 with the Bürkert Communicator software

The Bürkert Communicator interface is based on CANopen. An appropriate bus termination is mandatory. Therefore, activate the switchable terminating resistor on the bUS stick.

The device is connected via the micro USB socket (USB-bUS interface set 2 contains the necessary accessories).

Note: no external power supply must be connected to the micro USB socket. The device must be provided with power as described in chapter [“5. Product connections” on page 20](#).

8.3. Configuration management for easy device replacement

If a device needs to be replaced, the memory card can be removed from the defective device and can be inserted into the new device. This transfers all data from the device to be replaced to the new device. The memory card is available as an accessory and must be ordered separately (see [“9.5. Ordering chart accessories” on page 26](#)).

In order to successfully exchange the device, it is necessary that both the new device and the device to be replaced have the same article number.

8.4. Web server for Industrial Ethernet variant

All Industrial Ethernet-based devices (except for the EtherCAT® protocol) from software version A.13.00.00 onwards have an integrated web server. The server can be accessed via a web browser when entering the device's IP address (factory setting IP192.168.1.100).

9. Ordering information

9.1. Bürkert eShop

Bürkert eShop – Easy ordering and quick delivery

You want to find your desired Bürkert product or spare part quickly and order directly? Our online shop is available for you 24/7. Sign up and enjoy all the benefits.

[Order online now](#)

9.2. Recommendation regarding product selection

Note:

Use the Product Enquiry Form (see [“9.4. Bürkert Product Enquiry Form” on page 26](#)) for information on the device layout and send it to us once completed.

For the proper choice of the actuator orifice within the MFC, you need to know not only the required maximum flow rate Q_N but also the pressure values directly upstream and downstream of the MFC (p_1 , p_2) at Q_N . These are often not identical to the inlet and outlet pressure of the entire system, because there are usually additional flow resistances (pipework, additional shut-off valves, nozzles, etc.) both upstream and downstream of the MFC.

Use the Product Enquiry Form to indicate the pressures directly upstream and downstream of the MFC. If the pressure values are unknown or not accessible by measurement, an estimation is necessary, taking into account the approximate pressure drops via the flow resistances before and after the MFC at Q_N . The maximum expected inlet pressure p_{1max} must be specified to ensure the tight-closing function of the actuator in all operating states.

9.3. Bürkert product filter

Bürkert product filter – Get quickly to the right product

You want to select products comfortably based on your technical requirements? Use the Bürkert product filter and find suitable articles for your application quickly and easily.
