

CP-2000 Series

<combination valve>

Need to use pressure reducing valves, solenoid valves, temperature regulators or its combination for a specific purpose, with large space and great cost for installation . . . Have you ever imagined it may be helpful if a single valve combines such functions? Yoshitake CP-2000 Series integrates such functions into a single valve to realize space reduction, cost saving and controllability of plural valves without efforts.

Reliable ON-OFF system by the CP-2001

■CP-2001

Steam is usually supplied only when required. This means that steam is controlled as a batch (intermittent) system. Steam ON/OFF is switched by solenoid valve, however, rapid opening/closing operation of solenoid valve causes various problems to other devices such as pressure reducing valve. To solve such problems, we recommend CP-2001.

<Control example>

Solenoid valve ON	$P_1 = 1.0 \text{ MPa}$ $P_2 = 0.2 \text{ MPa}$
Solenoid valve OFF	$P_1 = 1.0 \text{ MPa}$ $P_2 = 0 \text{ MPa}$

Quicker startup feasible with the CP-2003

■CP-2003

In order to increase the performance and efficiency of the system and to save energy, a high-pressure steam line and a low-pressure steam line are used together. For this purpose two or more pressure valves have been used. Air is discharged with low-pressure steam and then rapidly raised to the intended temperature with high-pressure steam, and regular operation begins with low-pressure steam. Our CP-2003 can perform these operations alone.

<Control example>

Solenoid valve ON	P ₁ = 1.0 MPa	P ₂ = 0.5 MPa
Solenoid valve OFF	P ₁ = 1.0 MPa	P ₂ = 0.2 MPa
